

XA80 LIBRARIAN

PERFORMS THE FOLLOWING FUNCTIONS:

- * ALLOWS CREATION OF A LIBRARY
- * ADDS OBJECT FILES
- * REMOVES OBJECT FILES
- * LISTS CONTENTS

COMMAND LINE

- | | |
|-------------|--------------------------------|
| -a --add | Add files to the lib |
| -r --remove | Remove files from lib |
| -l --list | List library contents |
| -h --help | List command line instructions |

`xlib80 cmd library-name[.lib80] object-file[.obj80]`

Can be multiple object files but only one unique command per command line.

e.g. `xlib80 -a -r -l` is not allowed.

ADD

`xlib80 -a libname file file file . . . .`

↖ Wildcards are allowed

- If the library doesn't exist, it's created
- If an object already exists in the library, it is replaced.
- Omitting the file specs will create a new library (empty), if it doesn't already exist

REMOVE

`xlib80 -r libname objname objname . . . .`

↖ Wildcards are allowed

- If all items are removed, the library will be empty.
- Wildcards can contain ? or * just like filenames

LIST

`xlib80 -l libname [objname]`

- Objname is optional. If missing, * is used
- Wildcards same as Remove command.
